simplifystability®

**Boost Application Performance
and Usability – Automatically**

tricerat

Forbid your applications to take control.

Prevent system crashes that arise due to an overloaded system processor and uncontrollable applications.

Erratic applications reduce productivity, disrupt transactions, disappoint customers, and lead to inevitable hardware and support costs. Don't spend your limited funds on solutions that don't sufficiently address your application performance problems.

Simplify Stability allows you to overcome performance problems by giving you control of the way Windows allocates and manages CPU and memory resources. With this easy-to-use management tool, you can aid in establishing capacity planning by monitoring the baseline system resource requirements of each application then applying the optimal distribution of each as necessary.

Boost user productivity, reduce support calls, and maximize your organization's money expenditure.

Simplify Stability delivers application predictability by setting guidelines on your Windows processes, increasing the number of sessions that can be effectively supported by your servers. With Simplify Stability you can audit session and server stats to better manage, plan, and report system utilization and performance across an entire farm, per server, session, and application.

Restore system reliability with Simplify Stability.

Features

- Real Time CPU and Memory Stabilizer
- Highly Customizable Control Panel
- CPU Priority Control
- SuperMax - CPU Clamping Controls

Benefits

- Boosts application responsiveness and server capacity
- Ensures the quality of user experience and productivity
- Controls application memory usage
- Enables server consolidation
- Eliminates downtime associated with hung or unresponsive applications
- Overcomes 16-bit application problems
- Helps support quality of service and service-level agreements
- Enhances system management with real-time reporting and monitoring tools
- Enables period reporting and trend analysis of system utilization – logs application, server, and user activity as a CSV or XML formatted file

"Simplify Stability saved us from having to spend thousands of dollars on new hardware. It controls and optimizes the behavior of our servers, enhancing application performance and the satisfaction of our users."

— Steve B, IT Director, Fortune 500® Financial Services Firm
